

State of Michigan Standard End-User Software
As of 4/01/2019

State of Michigan (SOM) End User Standards Committee (EUSC) defines "Standard End-User Software" as software that can be deployed to an end-user device without the need of EUSC approval.

The following resources allow you to search for approved Standard End-User Software. If, you do not find the software needed, contact your DTMB Agency Services Representative (DTMB Client Specialist or Delegate) to confirm if an EUSC end-user exception (SXR) or an Enterprise Architecture Solution Assessment (EASA) approval is required.

Software Center Application

Standard software can be found in the Software Center Application located on your PC.

SIGMA SHOP Page

Additional standard software for purchase can be found in SIGMA's SHOP Page.

End-User Soft Standard Software

End-User Soft Standard Software is software that is not listed in the State of Michigan Software Center Application nor in SIGMA's SHOP Page but may be used without EUSC or EA approval. See below for a listing of available End-User Soft Standard Software:

End-User Soft Standard Software	
Title	Description
Duxbury Braille Translator (DBT)	DBT provides translation and formatting facilities to automate the process of conversion from regular print to braille (and vice versa) and provides word-processing facilities for working directly in the braille as well as the print. "Fonts" are used for displaying the braille.
Kofax Express	Kofax Express automates information capture and connects that information into various lines of business applications, ECM, ERP, BPM, workflow solutions and repositories like SharePoint, HP Trim, and FileNet. Licensed by installations and pages scanned.
Kofax Capture	Kofax Capture automates information capture and connects that information into various lines of business applications, ECM, ERP, BPM, workflow solutions and repositories like SharePoint, HP Trim, and FileNet.
Roxio Creator NXT Enterprise Platinum	Roxio Creator NXT Enterprise is DVD authoring, disc burning and screen recording.
SAP Business Objects Suite	SAP BusinessObjects BI (SAP BO, also historically BOBJ) is a reporting and analytics business intelligence (BI) platform aimed at business users. It consists of a number of reporting applications that allow users to discover data, perform analysis to derive insights and create reports that visualize the insights.

For purchasing questions, please contact your IT Purchasing Liaison at DTMB Financial Services or Central Procurement.
